### Getting a specific version from SVN (ex.: 7.1)

`svn checkout https://svn.code.sf.net/p/tikiwiki/code/tags/7.1/ mynewfolder`

### Using Mods

If you want to checkout latest files for Mods, then you have to separately use:

**Checking out Mods with SVN**

`svn checkout https://svn.code.sf.net/p/tikiwiki/code/mods/trunk`

Things in Tiki are changing rapidly. You may need to pick up your mod from
https://tikiwiki.svn.sourceforge.net/ and navigate down to mods > wiki-plugins. If you install the mod by
hand like this, you need to put the .php file in ./lib/wiki-plugins/ (see also the sh setup.sh fix step herein).
