This page is not actively used anymore and just kept for posterity. It was replaced by an internal tracker on Avan.Tech. Any relevant brainstorming is still done on dev.tiki.org (on the relevant pages) and the development mailing list. The list below contains some still-not-done-but-still-desired-features so it will be progressively cleaned up.

This is work which is requested by AvanTech.net, for Tiki-powered projects. Unless it's very specific or theme work, the vast majority of the work is made generic and destined to be in the next version of Tiki.

By making this worklist public, we are increasing opportunity for cross-pollination. Some of the todos here will be for specific projects and uninteresting to the general community however.

Jonny

Urgent

- Areas Perspective Multi-domain dogfood
- Multivalued trackers (GD)
- Additional search options if results are not good

Requests

- byte order mark
- On a fresh install of trunk, remove all things that are confusing for a new user Simpler config on Fresh install
- Send direct message via tiki-user_information.php
  - Done (enough) in r29036? (jb)
    - Yes, but in 6.x, I look at a wiki page on d.t.o, check who editing, click on their name and I get page not found – http://doc.tiki.org/user11682 ok now somehow
  - Add info link for admin to tiki-adminusers.php even for users with info disabled
    - Done for 6.1 (had also been done in trunk - conflict fixed)

Later

- Drag & Drop Dashboard with a limited number of modules
- Drag & Drop form builder for Trackers -> Form Builder
- Work on Tiki Connect

Philippe G.

- ModSecurity
- Security plan
- Automated tests on Intrusion Detection System
Sylvie

- Help Marc with **CRM**
- Tepoqa: issue with theme control and trackers (see emails)

Other

- **Trackers & categories**: add a tracker item to a category via `tiki-admin_categories.php`
  - `tiki-admin_categories.php` -> add spreadsheet
- Ajax selector in tracker: Text fields (predictive shows current values) Done: **Text Tracker Field**
- Theme control on a page basic (see Gary) Solved?

Louis-Philippe (LPH)
2013-03-21

- Discuss
  - Wiki diff client side?
    - (need to also revamp section edit)
  - Configuration Management and Systems Orchestration
  - ReactPHP
  - maps & tiki.org rebuild

Ongoing

- tiki.org Teams and Social Networking Dogfood
- **Ease Importance Priority**
- Site closed, site overloaded, site being upgraded via TRIM, Tiki is unable to connect to the database and similar should give error 503
- 'Validate uploaded file content' requires fileinfo but most servers don't have
- Update Notifier: indicate SVN/SimpleScripts/etc.
- Some of the phase 2 things on **Server check**
- Workspace UI: add more examples
- Pablo and **Mail Merge** and **Visual Programming**
- When in https, make the content also https (YouTube, .etc) or at least warn
  - **PluginKaltura**
    - [http://quality.tiki.org/job/Tikitrunk%20PHP5.4%20Compatibility/7/checkstyleResult/](http://quality.tiki.org/job/Tikitrunk%20PHP5.4%20Compatibility/7/checkstyleResult/)
    - Pref 'tiki_check_file_content' => array( has 'extensions' => array('fileinfo'), yet it's doesn't appear in the admin panel
    - [http://dev.tiki.org/Creating+New+Preferences#Descriptors](http://dev.tiki.org/Creating+New+Preferences#Descriptors)
      - Field in the report have issues a) locations Array, Array Array Array fixed
      - plugin is always empty fixed
      - Needs docs: [http://dev.tiki.org/Creating+New+Preferences#parameters](http://dev.tiki.org/Creating+New+Preferences#parameters)
      - Details is always empty fixed
      - perspective is always empty fixed
• Plugins: to override params by default
  ◦ Would be useful for YAML Syntax highlighting on profiles.tiki.org
  ◦ Maybe review PluginAlias interface as well
• Editing many tracker items at once (from a report): done
• Improve Matomo and Google Analytics integration (like this)
  ◦ Update http://doc.tiki.org/PluginGoogleAnalytics to new code
  ◦ Perhaps with abstraction layer?
• User Filter from PluginList
• check out http://code.google.com/p/phpsvnclient/ (maybe for code.tiki.org)
  ◦ .doc, .xls and .ppt uploaded as application/vnd.ms-office
• If a page has two aliases like http://doc.tiki.org/Ratings, it should offer me a disambiguation page, instead of an error. Did you mean X or Y?
  ◦ Need a way to detect when two wiki pages have the same alias (because the redirect fails)
• A way to override some prefs in some wiki pages (ex.: no watch, no title, etc.)
• Easy way to compare configuration of 2 Tiki sites: done
• Related-to field type in tracker is not working
• Move tracker items from category to another
  Ex.: http://dev.tiki.org/tiki-browse_categories.php?parentId=128&deep=off&type= should all go to "calendar" category but object organizer doesn't see them:
  http://dev.tiki.org/tiki-edit_categories.php?filter~categories=128
• Error moving tracker items from category X to Y

Next

• API
  • modules: filter by category (and/or/not) (Tiki9 with other module improvements)
• Distributed timesheet with OAuth (on hold until we find Oauth server which works on shared hosting)
  ◦ Remote inclusion of content (Shared site footer) -> Distributed data

Later

• Read-only mode (ex.: when migrating a Tiki to a new server and you want the old one to still show content but not have edits)
• Trackers: alternate storage with MongoDB, Drizzle or Cassandra or CouchDB:
  http://arbitracker.org/phpillow.html
  ◦ http://kev.inburke.com/kevin/reddits-database-has-two-tables/
• Unsatisfied with search results? Contact us or also search on Google/Yahoo!/Bing/etc. Peut-être une nouvelle pref search_custom_tips qui paraît au-dessus des résultats de Unified search?
• Custom modules: some params are missing such as perspective
  ◦ You need to enter the info manually
• Smarty: Make Tiki more robust to crashed because of unclosed ifs: done
• NameSpace thing like user: done NameSpace
• Revamp PluginSplit
• Continuous Testing Server
• Make use of Object Attributes and Relations to improve Code review
• **Wiki Parser Revamp rewrite**
• *Signature and/or datestamp and/or approval-vote and/or comment plugin/syntax*
• **Viral Tiki**
• meta-data for wiki pages (for glossaries)/ structured fields for wiki (genre, synonym section)

Details

• **PluginAnnotation**
• tiki-edit_perspective.php
  - when adding/changing a perspective, a feedback would be nice (like in regular admin panel)
    - not easy
• **Performance enhancements**
  - A few filters were causing issues and were reverted. Need proper value.
  - *ranklib-&gt;forums_ranking_most_read_topics() ignores second argument (forumId).
    forums_most_read_topic
• wikiplugin_perspective.php
• switch perspective and stay on same page
  - Unless custom home page?
• **Preferences** interaction with wiki content
• PluginMemberList improvements
• tiki-edit_perspective.php and others, offer 1-click to activate via accesslib
• test payment for 1-year memberships
• CSS control over semantic links so we do (doc(InterWiki)) instead of External Wikis links so
  ((doc:InterTiki)) or ((wp:LDAP)) can look good
  - We should use semantic links

Radar

• **Translation Student Program**
• **Side-by-side edit of two languages, with a &quot;translation is in sync&quot; button to save both wiki pages**
• **SisterWiki**
• **Mozilla**
  - Architecture Suggestions From Mozilla
  - https://wiki.mozilla.org/Support/TikiUpstreamTriage#Features_.2F_enhancements_that_should_.2Fgo_to_Tiki
  - wiki pages, tracker items, etc
• **Discuss:**
  - Task/action markup for meeting notes and plans (like Twiki Action Tracker Plugin)
  - Semantic links module: option not to show alias + if no results, hide module completely
• **TRIM** ongoing work
  - Site #2 : backups of files is not getting done (/home/client/wikiattach) but info is at tiki-admin_system.php
  - TRIM to have regular backup & upgrade of yesterday (to test trunk with real data)
    (ex.:mindmap)
  - add dependency and/or document how to set alternate editor
What do you want to do about it?
(P)rint list again
(V)iew files
(D)elete files
(A)dd files to valid list
(S)kip

>>> v0
sh: vim: not found

- Missing proposed branch when make upgrade
- Various code enhancements for [http://profiles.tiki.org/Collaborative_Multilingual_Terminology for 4.0](http://profiles.tiki.org/Collaborative_Multilingual_Terminology)
- Ongoing work on profiles
- A link to a Semantic alias doesn’t appear in backlinks

**Marc**

- Plan for [Approval Workflow](http://profiles.tiki.org/Collaborative_Multilingual_Terminology)
- prepare umontreal workspace proposal
  - semantic links between categories
  - MyTags / MyCategories
- Finish up work on [www.htaglossary.net](http://www.htaglossary.net), and Aetmis wiki
- Analyze feasibility and prepare proposal for offline Tiki project (requires workspaces) (very big project)

**Project A**

*Status: ongoing. Need to present a project ASAP for continuation of workspaces*

**Improve Tiki for Collaborative Multilingual Terminology**

**Improve Tiki as a groupware**

**Perms**

- When creating a page, how to inherit permissions from source page?
- Mass assignment of permissions, especially for wiki pages
- Item/Object perms: copy permissions from another object. (especially for wiki pages and categories)
- Better/Easier reporting of item/object permissions which override category and group permissions
- Permissions: when assigning permissions to item, an option to start with current general permissions
- Add green & yellow permission keys on tiki-listpages.php
- Standard permissions for features per groups

**Modules**

*Modules*
Re-architecture modules, like was done with plugins

- New permission to administer modules (tiki_p_admin_modules)
- Modules use should be restrictable with standard permissions

Improve Tiki in general

Improve Tiki for e-learning

Slideshow

- Generate slideshows from presentations and integrate S5 for e-learning

Improve Tiki for multiple deployments

- TRIM (esp redundancy)
- http://themes.tiki.org/TikiThemeGenerator to more easily create a theme close to look & feel of group/organisation

Improve Tiki for data mining & knowledge management

Mindmap

- Visual Mapping

Collaborative Watch

http://profiles.tiki.org/Collaborative_Watch

Project C

Event managements

Need to present plan September 2009 ASAP for Tiki5

4.0

- Need a way to insure people vote only once (more of a voting system than polls)
- Flash from images
  - Project has a lot of images and would like a Flash (or AJAX) banner which semi-randomly shows images in a banner. Let's plan at Animations

5.0

- PluginMouseover
  - Auto-resize relative to content
  - Deal with page being near the border of a page (ex.: bottom musn't be cut off)
- Plugins to always use jQuery interface
Need to have classes to control design via CSS
- PluginTrackerTimeLine, make enhancements generic and add to trunk
  - make time at top optional (default on)
- Printable schedule for attendees (per track, but also all tracks)
- PluginFade should detect if empty and not offer to click

**Project E**

Status: on hold

**Urgent**

- Fix current ugly workaround here: tiki-login_validate.php templates/tiki-view_tracker_item.tpl
  - wiki page user tracker should be sufficient to start user tracker (avoid the need to first need to go to tiki-view_tracker_item.php?view=+user)
  - Validation of email: admin configurable URL after validation (in this case, to fill out user tracker data)
- Change Registration Validation Process & Be able to resend emails

**Can wait**

- Current changes to lib/trackers/trackerlib.php should be in proposed? (copied from wikisym)
- Goal is that this site could be done with profiles next time.
  - Several template hacks (templates/tiki-view_forum.tpl templates/tiki-view_forum_thread.tpl) were made in the forum to make cleaner. Need to check state of 4.0 and options as needed to make as clean.
- IE6 detection and notice to visitors (either a note like YouTube or a redirection)
  - Native support for alternate content & layout per browser (Showfor plugin)

**Project F**

Status: need to give proposal in
For 5.0

**Membership management system**

- Shared contacts in trackers (need history because many people will edit)
  - Export (not sync, but on demand) to Outlook (which is main mail client)
- Self management of info **User Trackers**
- Renewal notices (ex.: 1 month before expiry)
- **Paypal** payments, including recurrent (LPH)
- MailMerge (newsletters with tracker data formatted via wiki pages)
Webmail

- can use shared contacts (above)
- Search (Lucene?)

Small organization business tools

- Profile with various tools needed for a small business or not for profit.
  - Going beyond Web Presence but a full suite of tools any organization needs.

Project G

Type: Corporate wiki knowledge base, bilingual

- Filter search results for wiki pages (MYSQL search) (Sylvie) Approved. Planned for early January
  - If page is unknown, it appears in all languages (I think)

Project K

This is for Tiki6

Zotero integration

- Zotero done

Glossary

Jonny

- Proceed to real upgrade from 6.x to 9.x, with live data from 6.x and modules from the test 9.x upgrade (urgent)

2012-12 feedback

- They don't like the new language picker. Let's try https://github.com/wikimedia/jquery.uls (Jonny)
- tiki-all_languages.php: number of translations (Jonny)
  - 2 langues: side by side
  - 3 langues: one below the other (or in a square by pretending there are two languges)
  - Test with 4 ou 5 langues too
- tiki-all_languages.php: some actions could be removed? (Jonny)

Old stuff

- Make glossary project code generic and part of Tiki6
- Fix tiki-listpages.php
- What will happen at upgrade time? this project has wiki page (no spaces or special chars) and description (long term)
  - Change to no longer use descriptions and use page alias so bookmarks are not broken
- Module list of all pages, filterable by category, filterable per language with max height (scroll bar), and with +/- to reduce (as normal modules)
  - Check if existing modules is OK (hard-coded filter) or if we want dynamic filter like on listpages.php
- Wiki pagename search: Search results in a module, where you can click to get results in the center (avoid search, click, back, etc.)
  - Same idea for general search results
    - Perhaps just user training?
- tiki-print_indexed.php?list=glossary&categId[]=5&languages[]=en&languages[]=fr&languages[]=es
  - -> add here comments=y
  - requires some refactoring
- \{wordlistall lang=fr translation=en|fr categId=16\} -> do not put A-B-C if no results for that letter (if easy)
  - Not easy.
- tiki_listpages.php (not trivial because refactoring may be necessary. May do direct watches but not things like structure watch
  - mass watch
  - show what you are watching

If easy
- Filter infos by language
  - Evaluer notification (watch) par langue (wiki + comment)
    - tiki-user_watches.php (plus comme tiki-admin_notifications.php)
      - nouvelle page dans une langue
      - page modifiée (inc nouvelle) dans une langue
      - commentaire dans une langue (incluant modifiée ou nouvelle) sauf si modification mineure
  - Alternatif: Filtrer le module (since last changes) par langue
    - Très important d’indiquer au système notre(nos) langues
      - Ex.: lien tiki-user_preferences.php

General
- Logout: doesn’t reset since last visit
- Internal & external link builders are not reliable cross browser
  - selected text is something everything before your cursor
  - wiki code is input at the top of page instead of where cursor is

Project I
- user tracker field: like email tracker field, send email to this user, upon changing of status or creation
Project J

latest 7.x Intranet for municipality

- mail notifications: make it possible to add some via interface (for categories, file gallery and wiki page)
- File Gallery

Project K

Large application form with lots of customized JavaScript

On radar:

- Display logic
- Multivalued trackers

Project L

Essential to fix

- Need a way to make reports
  - PluginTrackerFilter doesn't work with Relations field type
  - tiki-view_tracker.php?trackerId=19 doesn't work with Relations field type
  - PluginReport doesn't work with Relations field type

Nice to have

- New option for relations field type: Create a new one here, which is related to Multivalued trackers
- History doesn't seem reliable. Check one of each field type
- Date and Time
  - Date and time acts as if mandatory, even when not mandatory (I want to be able to leave empty)
  - Would like drop down for just the year
- Header are wonky in view mode, perhaps when "Hide empty fields from item view" is activated? (see item1364 on Marc's test site)
- Text field type: need to make "Display Size" work

Other

- Creating/editing a new field translates the name of field (changes content instead of just Smarty TR)
  - Workaround: work in English always
- Tracker field type relations: should be viewable and editable
- How to configure relations to have a list of works
  - 1- This work is an anthology containing ABC, DEF, etc. and This work is part of anthology XYZ
    - Done: http://doc.tiki.org/Relations+Tracker+Field#Many_to_many
- Checkbox: if empty, shouldn't indicate "no" in view mode when "Hide empty fields from item view" is activated.
• Can't change field type
  ◦ Should be possible when empty
  ◦ With a warning about data loss
  ◦ Certainly for simple ones like drop down to drop down with other

• TrackerFilter not working even for drop down fields: see Luise_Tracker_Filter
  ◦ Never mind. It works. It's just that there needs to be values in the DB to have a value in the drop down (clever!)

• Upload from URL doesn't for tracker items (file field type)

Project M
Urgent

• Module menu path (Show text of the menu item text for the level 1 parent of the current page)
  ◦ start at level X
  ◦ stop at level Y
  ◦ link (y/n)
  ◦ Last leaf should be what is on menu, and not page name
  ◦ Should use SEFURL link when activated

• Class for selected parents in menus Done: selectedAscendant

• Dashboard picker strategy & UI Done
  ◦ Click a button/link to change default group, and refresh, so it takes you to default home page for that group
    ▪ You can check out a dashboard, and decide "I like this" and it's in effect "Make this my home page"
    ▪ functionality is great. now we want a nicer UI

  • Customer writes: "I reviewed this feature with the team and here's what we'd like:
    At the top right of the page add our settings image from our product (I can send a better image) and when they click on that they get the drop down options and once they select an option that automatically becomes their default dashboard.

  • Marc thinks: perhaps we can Add an icon to group picker and position anywhere via CSS (still continue to modify via wiki pages)?

• In a wiki page to show Upcoming Events, for non admins this works, {module module="upcoming_events"} but not this: {events calendarid="1|6"} (no results)

• Fix registration (only perms or did something go wrong with the update?) Got fixed by tweaking permissions

• Fix config/bugs of tracker #42: It needs to be an issue tracker. Users can submit any number of tickets, and edit/comment/attach on own tickets, while never seeing other users's tickets fixed by LP

• Review and fix error messages from upgrade script, such as PHP Fatal error: Call to a member function query() on a non-object in /var/www/tiki/lib/profilelib/installlib.php on line 115 fixed by Jonny
  http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42327

• Menu permission problem (suspected not checking categ perms for menu items) see email fixed, the menu items were not in double ( )

Urgent_Registration

• Fix registration where group selection is bypassed
- issue when email is used instead of username (video sent)
  - but now, I can't complete the registration and get confirmation message
- capcha code should be hidden until group is selected when user_must_choose_group = y
  (otherwise, it's ugly/jumpy)
- label and fields of user tracker should be aligned with user/pass part moved to Lukas list
- Register button should only be visible after picking group (like Captcha) (can be local CSS change because this may not be the general case)
- Explanation of * should be visible before picking group
- Clicking registration link twice gives you "Invalid password" It should say maybe you have already validated your account. Please login. fixed

Medium priority

- WYSIWYCA search results on trackers with individual perms 2012-07-09 : fixed in Lucene by LPH
- Make things optional in tiki-searchresults.php done
- Customer+Dashboard modules
  - module="forums_most_read_topics" need a column with number of read
  - module="forums_last_posts" need a column with date
- odd menu bug where 2 items are selected (see email) fixed
- There will be some File Gallery/PluginFiles tweaking (to be discussed)
  - Get rid of the empty box pop up (which only makes sense when it's an image)
  - Put description below name to have nicer UI
    - In tiki-list_file_gallery.php
    - In PluginFiles

At the end

- Dashboard: calendar and files : make ... work (calendar should be later, and files, should be sooner)
- Multi-select when using nice jQuery UI drop downs (if easy).
  - Since it's not easy, please just exclude all multi-select drop downs (so we can continue to do CRTL-Click) from the jQuery UI select transformation. Done
  - Modules edit still squished with latest commit (see email) fixed with CTRL-F5
- Make the horizontal menu system automatically scale to available size? (with a varying number of elements) (see email) Done
  - But there is a flicker problem in IE8/IE9
- When viewing an event (tiki-calendar_edit_item.php?viewcalitemId=274) done
  - If no recurrence, hide "Recurrence This event is not recurrent" done
  - If no description, hide "Description No description" done
- profiles: export for modules
  - Needs to work for custom modules
- tiki_actionlog -> comment varchar(255) -> It should be much longer to deal with changes in Custom CSS
Post launch

- Hard crash when trying to assign a custom module (video sent)
  - Module with a plugin `{INCLUDE(page="Custom User Profile Menu")}{INCLUDE}`, and "Must be wiki parsed." was not checked off.
    - I guess it would less risky to use the pagemenu module instead 😐
- Registration -> Error when attempting to register on the staging site -> You do not have permission to insert an item -> This is resolved by adding `tiki_p_create_tracker_items` to both trackers, for Anonymous (expected feature because of Tiki improvements or upgrade bug?: dunno). I would think if a tracker is set up for registration, it should not be necessary to give `tiki_p_create_tracker_items` to anonymous.

Project 0

- Upgrade from 6x to 9x: ALTER TABLE `tiki_search_stats` convert to character set DEFAULT COLLATE DEFAULT Duplicate entry 'À' for key 'PRIMARY'

Project P

- 6.x Event calendar
  - Duplicate as should offer current date and time so you can
    - After duplicate, you are in mode view, and you can duplicate again
  - If end date is before start date, change the date to be the same

Project Q

- PluginFlash: add "Alternate Image param" for when Flash is not available (and until it loads when it is available) Done
  - Backport on local instance and upstream if acceptable
- PluginFlash: when used in site header: Not reload Flash at each page (if not too hard)
- Add a theme picker and language picker in tiki-admin.php which overrides just in the admin panel (same as site, English, etc) same as site, fivealive.css, etc.
- `tiki-plugins.php?refresh=y`
  - Avoid issue with PluginRedirect
  - Find a way around timeout (ex: AJAX or command line)
- Find a solution to login click refresh
• Ideal setup: anonymous when surfing, https login and stay in https when logged in, back to http when log out. How can Tiki be configured for this?
  ◦ We have SSL for abc.example.com but not for www.abc.example.com
    ▪ Removal of www is done via Tiki

Project R

• issue with disappearing filters in trackerfilter

Project S

• Jonny 9.x
  ◦ Captcha issue (urgent)
  ◦ Module issue fixed in trunk, will backport

  ◦ This happens when trying to search. We don't page page name search, but just full text. Maybe we configure in another way?

• Jonny trunk (if easy, no rush)
  ◦ Curly brackets in { " special characters and quotes. Perhaps we should use special characters from CKEditor?
  ◦ Since your last visit... 2013-02-18 1 new comments Untitled Monday 18 of February, 2013 13:36:54 EST
  ◦ Two clicks to comment in articles

• Marc
  ◦ Review Tiki Permission Check with Frank

• Long term, would have been nice
  ◦ Admin panel in EN, rest in FR
  ◦ Simpler menus
    ▪ Drag & drop menus
    ▪ Hide Sections and permissions
Project T

- Upgrade to 10.x and fix any bug along the way (Jonny and Marc)
  - Theme may need some tweaking
  - Some buttons disappear in IE in current version
  - `{trackerlist trackerId="148" showlinks="n" filterfield="1535"}`
    should show same list as from tiki-view_tracker.php?trackerId=148
- wiki page language picker drop-down. They want it like before

```

Marc

- To discuss: Use new References from Tiki10
- Interface for 3, 4 of 5 languages on same page
- references in es (like en and fr)

Low

- Avoid double-click to make a comment
  http://htaglossary.net/absolute+risk+reduction&comzone=show#threadId341

General Wishlist

- http://tiki.org/Infra should offer me list of all pages with Infra in name or alias, or SEFURL of blogs/articles instead of "Page not found"
  - similar pages needs to be on
• Make tiki-user_information.php easier to find (should be all over the place)
• i18n menus: like perspectives?
• http://doc.tiki.org/Multilingual+categories -> make left hand menu like this
  http://drupal.org/node/21779 (structure plugin/module but that opens only the node where you are)
  ○ Also need a plugin to show all pages at same sublevel (to avoid us repeatedly adding related links)
• S5 SlideShow, S6 jQuery and print.css in preparation for e-learning
• Installer: detect PDO and provide useful error message to avoid "ADONewConnection: Unable to load database driver " Invalid db object passed to TikiDB constructor"
• WYSIWYG-ish wiki
• test_permission_for_tiki_p_admin_wiki
• test PluginProfile
• test to see if still a problem: combineminify =y while minifycss=n
• USB key version of Tiki

Later

Text area editing helper
  • Help & PluginHelp on IE6 is not usable for plugins (can't select)

Continue work on ui.tiki.org quicktags and edit plugin helper to be added to Tiki 4.0

  • Toolbars
    ○ Have advanced section to hide everything except global and global comment.
    ○ trash icon
    ○ new custom tool
    ○ Check for missing tool (Dynamic variables)
    ○ Reset to default
    ○ Full screen edit: edit description not is available. intentional?
  • i18n relevant quicktags. Ex.: in French it's a "G" for Gras instead of a "B" for Bold (unless it's too much trouble) just add to language.php (check if still works)

Really hard so won't do
  • More than one translation for a term

Major project Tiki 12-13

  • Menu Revamp
  • TimeSheet
  • SimpleSAMLPHP
  • Print, including Fonts (which are sometimes part of PDF lib), Business Plans and Tiki Slideshow in BigBlueButton
Knowing that we can generate this in Tiki with dompdf, and we want something closer to this
On doc.tiki.org, tiki-print_pages.php Print PDF of a structure: I get an error, yet, single page printing is OK.
Alternate content by media
Modules: make them optional Prefs, and thus, we can put them in the admin panel in the relevant place for a Simpler config on Fresh install
Plugins: Override default params for plugins

- **Realtime (WebRTC)**
- **Offline and Sync**
- **Protecting the admins against themselves**
- **File Gallery Revamp**
- **Themes Revamp, to be able to access Web Template Repositories**
- **Project K (above) requirements**
- **Bootstrap**
  - Web-based installation of themes
  - Folder structure revamp
- **Converge Wiki Plugins and Modules to Gadgets**
- **Translation database in json**
  - Perhaps along with Tiki Connect?

**Alias**

- AvanTech.net
- AvanTech_net
