Developer Documentation

Structure

- Code Maps and Howtos
  - Activities
  - Activity Streams
  - Code Howto: Add a preference to an admin panel
  - Code Howto: Add translatable text elements to the User Interface
  - Code Howto: Create a Wiki Plugin
  - Create a new preference
  - Creating or maintaining translations
  - Code Howto: Splitting a Smarty template into smaller chunks
  - Code Howto: Dialogs
  - Database Access
  - Database Schema Upgrade
  - Events
  - Icons
  - Modules
    - Modules Revamp
  - Permission
    - Permission Check
    - Permission inheritance
    - Code Howto: Create a permission
    - Permission Revamp
  - Services
    - Dependency Injection
    - Create a service
    - Ex-ante functions
    - Ex-post functions
  - TikiObject
    - Object Attributes and Relations
- HowToDev
  - How to avoid direct access of a file
  - How to manage string localization in JS files
  - How to test JavaScript
  - Naming Convention
  - Composer
    - Composer Zend
    - Tiki 12 Composer Dependencies
    - Tiki 13 Composer Dependencies
  - Accessibility
  - How to comment your code
- Releasing
  - How to release Preparation
  - How to release: Branching
How to release
How to Use the Release Server
How to release: Follow up

SVN Usage
Get code
Commit Code
Where to commit
How to get commit access
Merge a commit from trunk
Merge a commit between branches
Revert a commit
Commit to a proposals branch
Copy a change from one branch to another
How to figure out what revision number causes a bug
