Image Directory Revamp

Tiki img directory consolidation.

Revamp finished and part of Tiki9

Goal

- Stage 1: to have a clean, organized structure to find things where they are expected - DONE
- Stage 2: delete unnecessary, unused files - partly DONE, still many unused files left

Timeline

- lets agree first on how it should be, than figure out how to do
- March 2nd - 4th: make it happen for Tiki9 (trunk now)
- Document the changes made: Update docs for Tiki 9 -> Tiki9

Number of references in all the files

Some grepping stats (revision 39998 after clearing Tiki cache):

```
luci@w7-vbox-ubuntu:/var/www/tikitrunk$ grep -Ro --exclude-dir=.svn 'img/\' * | wc -l
1029
luci@w7-vbox-ubuntu:/var/www/tikitrunk$ grep -Ro --exclude-dir=.svn 'images/\' * | wc -l
1448
luci@w7-vbox-ubuntu:/var/www/tikitrunk$ grep -Ro --exclude-dir=.svn 'pics/\' * | wc -l
4574
```

Revamped img dir structure proposal

- img/
  - img/avatars/
  - img/flags/
  - img/icons/
    - img/icons/large/
    - img/icons/mime/
    - img/icons/sprite/
    - img/icons/svg/ (for future use of http://raphaeljs.com/icons )
  - img/smiles/
  - img/tiki/
  - img/trackers/
  - img/webmail/
  - img/wiki/
  - img/wiki_up/
Issues / Questions / Concerns

- things might get temporarily broken in trunk but on the long run we should get through this
- afraid if the "icon themes" override functionality will be preserved (see for example Strasa theme) — luci
- what happens if there is wiki page created named "images" and rewrite rules are on via .htaccess - it is very possible case. Will the images be still readable or broken? would not it be better to use the img dir or pics dir instead? — luci
  - OK. Just tried and it reveals, that if one creates page named "Images", he/she cannot access the created page after save using the SEFURL, because Tiki thinks it is the images/ dir and there is the index.php redirect to Tiki index page. — luci
    - luci: Only one problem remains with the images dir - now when it is gone i would expect that my test wiki page named "images" will be working but i get error instead redirecting me from http://localhost/tikitrunk/images to http://localhost/tikitrunk/images/ and the error is: "Page not found images/" and the theme is completely broken
    - gezza: on my localhost with SefURL on "tikitrunk/images" is being displayed fine
- just spotted it: what about lib/images/icons/? — luci
- known issue - Xavi reported his custom icons use old paths to pics/ and he gets PHP error now - will need php upgrade script created in installer/schema/ to replace the paths in tiki_preferences tool_icon

Things to Check

- Now we have just some things to check remaining:
  - rewrite rules in .htaccess
  - is there any Tiki 9 specific profile using the old paths on http://profiles.tiki.org?
  - is there any Theme on themes.tiki.org using the old paths?
  - are there any possible use cases causing trouble after upgrade?
    - custom toolbar icons created at /tiki-admin_toolbars.php get broken after update if they point to the legacy pics/icons folder. Related data is stored in tiki_preferences table with pref name tool_icon.
  - does fresh install work fine?

Overview
