Modules

In Tiki, a module is simply a box of content that can be placed in layout areas (eg: topbar, left, right, bottom, etc) and also in text areas (eg: wiki pages). All modules are included with the default Tiki installation.

'Last Changed' module formatting is inconsistent

jhwheuer20
top bar and similar Modules going full width causing visual disruption

upcoming_events module: only remove event when the event is over

Visibility -> section does not works for "wiki page"

Module "articles" not filtering for language lang=XX

Clicking the control panels in the new Admin module does nothing

Allow for rss feeds to use description data instead of title data for items (a la Yahoo Weather)

Updated items should have permissions checking

Javascript toggle is broken
