Share

This page is to discuss, improve, and likely streamline (merge?) all share ("push"-type) functionality in Tiki. *Watch* this is a pull mechanism and will likely stay independent.

Related: [Token Access](#)

Current Tiki features

- "Promote" was added to Tiki6 (Renamed to share as requested in r28263)
- Plugin [Sharethis](#) has a bug, do not use
- [Tell a friend](#) has a bug, do not use
- [alert](#)

### Questions

- Is there anything in [Zend Framework](https://framework.zend.com/) to help with this?

Most services offer a http-based api either useable with javascript (no need for frameworks) or php, where we can use the http classes

### Feature requests

- URL shortener (Implemented in r28263)
- Useful because
  - could be using [page alias](https://tiki.org/help:page.alias)
    - append in [Wiki Handler](https://tiki.org/) could perhaps be useful

Existing services

- http://addthis.com/
- http://addtoany.com/
- http://sharethis.com/ - Has a bug, do not use

Why a new "Share" feature

- Every user can authorize the site with oauth for twitter/facebook so they need not to log in to each of the sites to push a message out on these channels.
- Instead of having a man in the middle doing the service for us (and the statistics/tracking), we can do it here
