Tracker to Tracker association
Tracker to Tracker Association

Two slightly different 'use cases' have been identified:

- **Master List**: where a common set of fields are stored in an associated tracker for multiple other trackers which store detailed data for individual areas
- **Index List**: where a subset of fields are 'logged' in an associated tracker for multiple other trackers which store detailed data for individual areas

Table of contents:

- Tracker to Tracker association
  - Tracker-to-tracker Master List use case
  - Tracker-to-tracker Index List use case
