Getting a specific version from SVN (ex.: 7.1)

```
svn checkout https://svn.code.sf.net/p/tikiwiki/code/tags/7.1/ mynewfolder
```

Using Mods

If you want to checkout latest files for [Mods](#), then you have to separately use:

Checking out Mods with SVN

```
svn checkout https://svn.code.sf.net/p/tikiwiki/code/mods/trunk
```

Things in Tiki are changing rapidly. You may need to pick up your mod from <https://tikiwiki.svn.sourceforge.net/> and navigate down to mods > wiki-plugins. If you install the mod by hand like this, you need to put the .php file in ./lib/wiki-plugins/ (see also the *sh setup.sh* fix step herein).
