

Spellcheck

This has been removed as it's handled by the browsers nowadays... You can add grammar checking to Firefox with <http://www.afterthedeadline.com/>

We need to deal with several languages (IE and Firefox propose spellchecker).

This feature is usefull when searching. It should be used in google-like way.

For enchancing performace, spellccheking dictionaries have to be imported into separated table in the Tiki database.

- We should make more available and dogfood this.
- Need ability to **add** new words to the dictionary.
- Currently the spellchecker flags capitization as a spelling error.
For example, if **foo** is in the dictionary, **Foo** is shown as a misspelling. IMHO, this is wrong.

With browsers/browser plugins offering spell checking, is this a high priority?

- Maybe not high, but need a way to ensure the site-specific word spellings are maintained (by the site — not by the end-user).

Please also see:

<http://wiki-translation.com/Function+Group+E%3A+Computer+Assisted+Translation+Tools>

(look up a word or a phrase in an online resource such as Wikipedia, Wiktionary or OmegaWiki.)
