Description

Hi,

I attempted to configure tikiwiki to use PEAR:Auth authentication posted by this link

<http://doc.tikiwiki.org/tiki-index.php?page=Login%20Config>.

However, I still get error "invalid username or password". Is there any way I can debug this?

My installed PHP version 4.4.6 with PEAR:Auth installed.

My Apache version 2.0.59 configured with LDAP.

Any suggestion is appreciated.

Solution

Closed as further information not provided and version no longer supported.

Can you still reproduce this with Tiki 5?
