Description

on 1.9.cvs

Horizontal phplayer menu is behaving weird when adding new options, etc. (sections level 0 and options inside dissapearing + separators rare)

MenÃfÆ and menÃfÆ items below, in utf-8 encoding.

```
INSERT INTO `tiki_menu_options` (`optionId`, `menuId`, `type`, `name`, `url`, `position`,
`section`, `perm`, `groupname`) VALUES (171, 43, 'r', 'Comissions', 'Comissions', 10, '', '', ''),

If interested in analyzing any more in the server where it happened, please, request me an admin account at:

<http://www.moviments.net/valldelcorb>

so that you can reproduce the buggy behavior.

I'm afraid of adding new items or sections since they break the present layout of phplayer menus if it is set as horitzontal.

when previewed as vertical, it's always shown ok, at it should.

I was using twist.css theme style.

April 4th: the problem seems to dissapear if using tikineat style instead of twist.css theme style. See the screenshots of the same menu with each theme style.

Solution

Thanks sylvie for reporting that that issue seemed to be theme-specific.
