Description
In the Quicklinks, there are two table links (one for the old wiki-table syntax, and one for the new).

On the Wiki table syntax in effect (from tiki-admin.php?page=wiki) should appear.

In templates/tiki-edit_help.tpl, this is already done with:

{if $feature_wiki_tables eq 'new'}

On second thought, since the new table syntax is so much better, and it's now the default on new installs. All references to old syntax should be phased out. People should only use it if they have large amounts of legacy data that they don't want to take the time to convert.

We also got some extra contacts via the contact form on info.tiki.org of people that can't search in the forums.

Any chance for a quick WYSIWCA fix? Otherwise, we can turn on feature_search_fulltext, but it would be better to forge ahead with Unified Search.
