Description
   I am running Tiki 1.9.7 with MySQL on Linux.

   I have gone through the tiki_mysql.sql file and have found no reference to the column listed in the error message:

   Context:
   File tiki-galleries.php
   Url tiki-galleries.php
   Query:
   select g.*, a.`name` as parentgalleryName from `tiki_galleries` g left join `tiki_galleries` a on g.`parentgallery` = a.`galleryId` order by `name` desc
   Values:
   Message:
   Error Message Unknown column 'g.parentgallery' in 'on clause'

   This appears as soon as I click on "Image Galleries" folder from the Menu module, or "Galleries".

   I also get the same error message when I try and click on "Upload Image":

   Context:

File tiki-upload_image.php
Url tiki-upload_image.php
Query:
select g.*, a.`name` as parentgalleryName from `tiki_galleries` g left join `tiki_galleries` a on g.`parentgallery` = a.`galleryId` order by `lastModif` desc
Values:
Message:
Error Message Unknown column 'g.parentgallery' in 'on clause'

Apparently this column needs to exist, but I have no idea what the column settings should be. This is preventing me from even using the image gallery feature.

Hi!

I have never seen that bug.

If possible, please try to duplicate the bug on a clean install to make sure it's not a local configuration problem.

Did you upgrade the database?
1.8to1.9 upgrade. You can run this script as many time you want in 1.9. The column insert is in it
