Description

Using 1.9.cvs, user uploaded avatars can only be viewd correctly if they are .gif images.

Shouldn't it allow at least, .png and .jpg images? (currently, it shows a black square, if so)

I've modified the tpl in cvs (branch 1-9) to guide users to upload their images in the needed format to work in Tiki. When (and if) fixed, please, change or remove that note in the tpl file

📋

/cvsroot/tikiwiki/tiki/templates/tiki-pick_avatar.tpl,v <-- tiki-pick_avatar.tpl new revision: 1.8.2.7; previous revision: 1.8.2.6

-
It seems an issue related to the server, since it does work for me on other servers.

Solution

Closed as appears to work, no additional information provided, and version no longer supported.
