not sure if this is the best way but i managed to do a quick fix. check in your stylesheet for ".tabcontent" and add {width: 97%}. works for IE and firefox. if you want to fix for firefox only, just do {width: 97% !important; width: auto;} which only applies 97% to firefox. ok.....

another things is, i tried to change the {\$rows} of textarea.editcalitem which in firefox display overlap right side...didnt manage to fix.....

but the main fix above fixes width issue on this one too....evenso its still overlapping. at least no scrollers.....
