Description
   Just play around with it (sending a task, etc) and you will see.

   Maybe it's because this site has thousands of users and on a clean install, it will be fast.

   _____

   When adding a task from a module:
   Execution time: 212.52 secs Memory usage: 10.13MB 143 database queries used GZIP Enabled
   Server load: 6.65

   _____

   The problem seems to be with the module "user_tasks" and presumably "user_tasks_public". When these modules are not assigned (activated), the task feature is fast (and quite nice/complete, I must say). It appears to be when the module cache is (re)generated.

Is this still an issue? If so please update the version on the ticket.

Bernard Sfez / Tiki Specialist 28 Oct 21 06:10 GMT-0000

Please retest, as per Tiki23 a lot of improvement have been made concerning performances.
