Description

I would like to see a way to control how often I receive watch emails.

Situation 1 - DIGEST mode:

I would like to receive a single email each day that identifies every watched item that changed.

Situation 2 - TIMEFRAME mode:

If a page is changed by the same user within a preset timeframe, I only want to receive a single watch email. To avoid the "lost edit" issue, many users SAVE their wiki pages frequently (sometimes several times per hour). If I'm watching the page, I'll get TONS of emails. I'd rather get 1 email per user change per hour, for example.

Solution

This was added to Tiki4, by floh1111. Please test and confirm it works for you.
