Description
        LDAPv2 is obsolete, and the use of LDAPv3 is now standard practice. In fact, the latest releases of
        OpenLDAP don't even support LDAPv2 properly anymore. However, PHP's ldap_connect() and
        PEAR::Auth default to LDAPv2.

        The patch to use LDAPv3 is attached. It shouldn't be difficult to make the LDAP protocol version a
        configurable preference.

Solution
        This should be fixed in Tiki 4.
