Description
Did a fresh CVS checkout and install of BRANCH-1-10 at 1600 UTC on 2007-08-12. After installation and the initial login, there is no admin menu available. This means there is no menu item to get to the admin page to start enabling features.

Solution
Load the admin module as part of the default install for the admin user.
Fix: rename $user variable to $userlogin because $user conflicts with reserved smarty $user variable.

Importance
9 high

This is a cache issue. After performing the upgrade, Tiki tells you that you need to clear the templates_c cache (but it is easy to miss!). Tiki should *AUTOMATICALLY* clear the cache:
- After an install/upgrade script
- After any Module, Menu, or Template edit/change
- After any Site Identity or Theme change

Removing files in this directory does not help.
So you cannot start customizing and so you can not start with TikiWiki.... Can I copy all customization from my local test environment with Directadmin import/replace-option. And if yes: what tables?

apestaartje697 05 Mar 08 11:37 GMT-0000
Sorry, I forgot this question, also put in the forum some days ago.
Can you tell for a newb what the solution is meant in terms of what to change in what files in the installed corrupted version.
