Description
    Wiki Syntax for special characters seems to fail in 1.10 (I can get it in WYSIWYG). Thus, ~169~ no
    longer shows the copyright symbol.

    The problem appears to lie in TikiLib - parse_data
    if (!$simple_wiki and $prefs'feature_wysiwyg' == 'n') {
    $this->parse_htmlchar($data);

    Here's this issue - I have WYSIWYG set to Y, but NOT showing by default. It seems that the test
    should be whether WYSIWYG is actually showing - I have no idea what the variable is.

Solution
    I replaced:
    if (!$simple_wiki and $prefs'feature_wysiwyg' == 'n') {
    $this->parse_htmlchar($data);

    with:
    if (!$simple_wiki and $_SESSION'wysiwyg' == 'n') {
    $this->parse_htmlchar($data);

    in tikilib=>parse_data and it appears to work.

Importance
    7

Priority
