Description

Some recent work from Kernel22 has improved the system field type in TikiWiki. (ItemID & Ratings)

However, this has uncovered some surprises.

1- When tracker fields are modified, a new "system" ItemID appears. It's great that it's now accessible but it shouldn't appear without active admin intervention.

2- Ratings column moved from left to right after I changed some settings for the tracker.

3- Any favorable behavior change should be ported to 1.10 as well.

I am not sure it's related, but I sometimes get this error when I add a tracker field:
