Description

Hi there,

I want to nkow if it is possible to integrate the tikiwiki login process with another page, I want to create another secure page using the tikiwiki login process, Do you guys have any hint for doing that?

My page will be in php also, I know that I will probably have to do some inclusion but don't which file to include in my code and which function.

Any help will be much apreciated.

Thanks

Solution

Wish has been responded to and won't be incorporated into Tiki.

Here is a way to include the login box in a wiki page:

Log In

Username

Password

> Remember me (for 1 week)

Log in

Here is an example on how to show the login box or something else depending on the group of the user: http://dev.tikiwiki.org/tiki-pagehistory.php?page=Add%20to%20wishlist&source=0

Hi there,

Thanks for your reply, I appreciate your hint, it's really helpful. but it's not what I am looking for, I want to create another web page not in the wiki with password protection, and I want to use the user login module of tikiwiki, instead of creating a new login process and new users/passwords, the user/pass works for tikiwiki and the other site, since tikiwiki have all the security stuff set already and can login with many methods, that will be nice to integrate with other web pages.

Thanks again for your help.

Marc Laporte 04 Mar 08 13:29 GMT-0000

hmmm, I am not sure I get your use case. Why not a wiki page? 1- You can provide different permissions to this specific wiki page (so no edit/history button). 2- You can turn on html support for a more complex page.

Please also see:
html pages
http://doc.tikiwiki.org/HTML+Pages

Since wiki pages can take HTML, this feature is not used often.

Integrator
http://doc.tikiwiki.org/Integrator
But you need to program this. And the TikiWiki install needs to be able to access the remote page

---

If your other system has a login system, you could modify to use InterTiki:
http://doc.tikiwiki.org/InterTiki

Best regards,

M ;-)

I can not include what I want in tikiwiki, It's some php pages that access to a mysql database, the pages are not static HTML pages, I have some secure parts and I want to use the same user/pass as tikiwiki, I want to be able to see if the user is logged in or not directly from my php code, I can browse the tikiwiki code and look for that also, but I was wondering if tikiwiki have some integration tools like SMF boards have, they have a special php API that help you secure other pages with the same login system.

Thanks for your help again
