Stateful? by rpg

The idea of an aggregator –and ideally one that could be put on a Wiki page together with other items - sounds great. But only if it's going to be a stateful aggregator. I.e., I don't want one that will forget which items I have read when I revisit it.

A simple fix would be to somehow highlight all the RSS feed items which have a date/time which is after your last login. A bit like the "Since your last visit" module.
