Related-to

- ✖ Tiki Calendar add possibility to pick a time zone (especially UTC) so daylight saving time (DST) is well handled.

Description

I give anonymous users read access to forums, etc. Their timestamps are all UTC based .. seems funny to them since all users including anonymous would be in local TZ

I can set it in Mytiki, preferences but that doesn't apply until someone logs in

I found a display_timezone setting of "EST" in the twiki_preferences table that seems to be totally ignored

Further, I found code in the php files that was commented out with a note "-- Obsolete from 1.7 timezone changes". I don't know what that means

Could a feature please be added to allow the admin to set a default TZ for the site (that the user could then override in Mytwiki, preferences)

Solution

Time Zone has gone through an overhaul for 1.10

As per Tiki23, after I check that next.t.o was set to display UTC and my user uses IDT I started to evaluate but couldn't find anything wrong.

There were a lot of changes between Tiki2 and Tiki23. ;-)

We use Timeago (so all is relative) Tiki by default (anonymous) use the computer timezone...

Maybe it is not relevant anymore.
