Description

Categories have associated privileges. Tiki would be more secure if categories were inherited when a new child page is created in a structure.

Solution

Xavi (Jan. 15th, 2009):

Please retest with latest stable release (2.2 as of nowadays).

Ensure you have the setting "Categorize all structure pages together" (or similar, I'm translating from another lang.) under (Admin -> Wiki).

And report back, please.

Thanks in advanced for reporting.
