Creole Syntax as standardized syntax should definitely be used.
Wikimedia synatx is wide-spread but did not have as much thought as creole syntax had and also was not developed open and in a community and aimed at becoming a standard.

Having yet another syntax with TikiWiki is a bad way to go.
A switch now, after having used another syntax, may only be done on a new major version, sadly.

It may also require some effort for ppl to change content / to do converters,
but new users using wiki syntax would greatly profit from it.
With an automated converter there wonâ€™t be differences for ppl using the tool-icons / WYSIWYG features anyway.

TheOnlyMerlin 16 Apr 11 07:27 GMT-0000

When I was looking at wiki systems, the syntax in Tiki was one of the things that actually made me completely skip the whole system (I initially went with pmWiki, which has some cool elements). I eventually left because of limitations of pmWiki, and gritted my teeth about the proprietary syntax used here.
Myself, I would not suggest a complete switch to a CREOLE baseedd system. What I would suggest is to allow modification of the syntax systems from tiki installation to tiki installation. The idea being that you could select a "standard" (such as: tiki wiki, media wiki, creole tiki, etc) and use that, or you can modify your existing syntax style. This should also be available via an interface (no programming required). This would allow you to customize it to fit your purposes. however, I can see this hurting performance, as it (I would think)would add an extra step in syntax interpretation.

Feasible?

Marc Laporte 02 Dec 21 00:22 GMT-0000

Over a decade later, CommonMark is what WikiCreole wanted to be.

The plan so far: WYSIWYG and Markdown

Marc Laporte 04 Nov 22 18:18 GMT-0000

Closing as done. While we didn't go with Creole, we did go with a standard text syntax.

Tiki Flavored Markdown
