Description

After creating a new blogpost and saving it, the post shows a lot of empty lines at the beginning of the post.

Looking at the html result, there are about 9
 entries before the actual text.

The branch is downloaded on wednesday, 25th of June 2008 8AM GMT.

A 1.10b1 release of about a month ago did not show this behaviour.

Solution

Fixed in 3.0 with svn update from 2008-10-03

This "bug" seems to still be present in TWv4.1. Perhaps someone can revisit this "fix". thanks, -sd
