## Solution

Guide the user to create the required directories just like the install script.

## Importance

1 low

Manually create directories and give permissions using provided file manager.

The last error message:

Notice: Undefined variable: errmsg in  
[/www/1stfreehosting.com/o/t/h/othman/htdocs/tikiwiki/lib/mods/modslib.php](http://www/1stfreehosting.com/o/t/h/othman/htdocs/tikiwiki/lib/mods/modslib.php) on line 117

From modslib.php:

```
$fp = @fsockopen($u'host',80,$errno,$errmsg,30);
```

I don't think this site allows fsokopen()

So how to do it manually?

Still nothing happens.
