Description

Hello,

I enabled the option "Detect browser language" in the internationalization module and added the switch\_lang module.

But if I'm not logged in and want the change the language using switch\_lang it always falls back to my default language.

You can try it at <http://series60-remote.sf.net>

I had the same problem on <http://www.opensourcecms.com/cms/tiki/>

Hi,

I can't reproduce the problem on Tiki 6.x so I'm closing this bug.

Please reopen it if I missed something and the issue still exist.

Thanks
