Description
While updating from 1.9.11 to 2.1, we ran into a bug in tiki-categpermissions.php.

We have a category structure with multiple levels of categories, and assigning to children seemed not to work as intended.

I had a look at the code, and it seems like it only assigns to one level of children, and never checks for more levels of children. I rewrote the code quickly to solve our problem, and attaches the patch I used.

I don't know if this breaks all code guidelines in tw, but it works ;)
