Description

Say I need to make a link such as:

[http://en.wikipedia.org/wiki/Argument_map|Argument map]

I could use an external wiki link which is like this:

((wp:Argument map))

Even nicer would be an image (instead of ) so the visitor knows he'll be sent to Wikipedia.

Also, would need:

- optional title: to explain what this site is about. (ex.: this is a sister community)
- option to open new window

these would be set centrally and you could override.

Perhaps the direction to take is to build with plugin alias
