Description
    The tiki_p_admin_trackers permission is needed to both edit the main attributes of a tracker and add/change fields etc., as well as to Export or Import csv files.

    This means that when it makes sense to allow some users the privilege to Import and Export data in batch mode then they will also have edit access to the field structure etc which may not be appropriate.

Solution
    From a usage point of view the current admin permission should be split so a separate permission is needed for Export and Import so that this can be assigned to a user Group without the Group also having full edit access.

    FIXED new prefs added some time ago
