Description

Tiki has a basic feature to generate slides from wiki page data. This permits to prepare slides collaboratively and makes them highly available/searchable/accessible.

<http://doc.tikiwiki.org/Slideshow+User>

However, the feature is not very exciting.

1- I do not want to rely on an external service to distribute my slides. I want to put on my TikiWiki-powered sites. And I want them to be searchable & accessible. An export to Flash is not ideal.

2- I want something standards-based to make sure I can use when I am not using my computer (like at FOSDEM). Sure, Regis did an amazing presentation at the last TikiFest, made with Keynote. But now, how to share, mix and re-use?

3- I want a way to collaborate (when preparing) & share slide information in an easier fashion.

a) I have done dozens of presentations. The collaborative process using desktop tools is very inefficient. I remember a long night in a hotel room in Tunis where we were collaborating over Skype to fine-tune a presentation.

4- As Dogfood, I think these slides could help to

- A) Make nicer tutorials/documentation
- B) Promotional material on info.tikiwiki.org

5- Finally, I want something much nicer than what we have now. The quality/design/features of S5 reloaded has nothing to be shy about compared to Desktop apps:

http://www.netzgesta.de/S5/reloaded/advantages.php?id=sunny_gfx

Some goodies I look forward to using:

A- A second browser window which shows me a timer and some notes.

B- A special syntax to handle handouts.

6- Some of the concepts (ex.: image resizing depending on current browser size) could be useful for Tiki in general.

Here is a proof of concept of

Wiki page:

<http://trim.rclaporte.com/svn/slides/tiki-index.php?page=tests5reloaded>

Slides:

<http://trim.rclaporte.com/svn/slides/tiki-slides.php?page=tests5reloaded>

Investigate:

<http://meyerweb.com/eric/tools/s5/>

<http://www.netzgesta.de/S5/>

http://en.wikipedia.org/wiki/S5_%28file_format%29

<http://icant.co.uk/domslides/>

Ideal:

Long-term collaboration/integration of one of these, or a similar open source project

Perhaps with jQuery?

Solution

S5 is started in Tiki6, and will be better in Tiki7
