Description
    I'm using TikiWiki 2.2. and tried to enter the following in the "meta robots" field of the Meta Tags
    admin panel:

    -index
    -follow
    -index, follow

    As per http://doc.tikiwiki.org/tiki-index.php?page=Meta%20Tags&redirectpage=Meta%20Tag these
    seem to be valid values.

    Once I pressed "change settings" the parameters I entered were gone. When checking the source
    code of index.php I found out that no robot instructions have been included.

    Looks like saving those data doesn't work.

Solution
    Parse and save the entered details properly.
    duplicates bug 2300 - fix on the way

I inadvertently posted this bug as well (sorry about that - see #2300) and it looks like a database structure bug with a row in the prefs table missing. I've 'fixed' it in my instances by hacking the database which is obviously NOT something everyone will want to do.
