Description

The plugin section of the wiki help is listing the plugins aplhabetically based on their english name. When it is translated to another language the sorting remains based on the english name, it is quite confusing and looks a bit chaotic in other languages in my opinion. Is there a specific reason why the code here is written this way? If not, can this be fixed for Tiki 4? I dont know how to do it but would appreciate it 😊

Solution

r46177 in 11.x
