Description

When files are attached to a gallery which have dependents <files galleries> the list of destinations don't makes appear these dependants galleries.

So when you have a too much populated gallery if you create sub-galleries you cannot move files to these sub-galleries and split your population.

Solution

For the moment no idea.

It can be very simple. Just a recurse browse of dependants and list into allowed destinations.

But may be it exist other reasons of this "bad" limitation of possibilities.
