The module freetags_morelikethis shows links a user has no permission to view.

I have to introduce a knowledge management system in our company and am convinced that TikiWiki is the solution to go.

The problem is:
- lots of data is classified (categorized)
- Tags are required to build a network of the knowledge
- the users will not accept a system that leads often to "permission denied"

Without this module being WYSIWYCA I cannot suggest TikiWiki to the management.
