Description

Hi All,

I'm working on the Tikiwiki 2.2 with a LDAP authentication.

In the login option, I see it is possible to automatically give someone access in the Tiki if this person is in LDAP directory.

My question is: Is it possible to define access with a Distribution List group and not with the entire LDAP directory?

On another note, do you know why "LDAP Member is DN" can not be set to "yes"?

Thanks for your response

Hi, we are currently reviewing a lot of LDAP-authentication issues.

Is this issue still there on recent Tiki versions? Tiki 2.x is quite old and out of support.

I have not found your reference to «LDAP Member is DN» maybe the wording changed.

Have you managed to restrict to the Distribution List by changing the «Base DN»?
