

Workaround

Xavi: Did you try with the setting "Categorize structure pages together", plus the permissions you like to that category?

This way you may restrict somehow who can access (view, edit) certain structures (and all their current and new pages) and who can't (by exclusion)

Moreover, on a group basis, you can define the category to be assigned to new objects created by users with that group as default.

This is working fine for me (so far) in Tiki 3.1. Can you try if this solves (as a workaround) your problem?

On the other hand, what you say seems to me that it wouldn't easily allow users to decide whether new pages have to be in the structure or not (just by the new link with double parenthesis... or it should be coded to make it very easy to avoid confusion... (personal opinion: I'm not a coder, though)
