Description
As noted in bug tracker id 2474, bullets parameter doesn't create a bulleted list. "All" list is poorly formatted with page links that don't work.

Solution
Below is the patch to fix these issues in lib/wikiplugins/wikiplugin_attach.php. If I'm able to post an attachment after I submit this patch, I'll attach the entire file with the fixes.

Below are the changes:

Line 226 and 238: Concatenation "." added so that bullets appear when elected
Line 226:
$link.= '<img src="tiki-
download_wiki_attachment.php?attId='.$atts['data'][$n]['attId'].$url." class="wiki"';

Line 238:
$link.= '<a href="tiki-
download_wiki_attachment.php?attId='.$atts['data'][$n]['attId'].$url.'&download=y" class="wiki"';

**Line 278-280: Fixed link to pages when all parameter is used**

Lines 278-280 replaced with:
$pageall = strip_tags($atts['data'][$n]['page']);
if( isset( $all ) ) {
    $link.= " attached to "."<a title="".$pageall.'" href="".$pageall.'" class="wiki">'.$pageall.'</a>";
}

**Line 292: Changed separator to create a new line for each attachment**

Line 292 setting of $separator variable replaced with:
if ( isset( $bullets ) && $bullets ) {
    $separator = "\n";
} else {
    $separator = "<br />
";
}

Importance
4
