Subject

Use email instead of username when logging in

Version

4.x

Category

- Usability
- Feature request

Feature

User Administration (Registration, Login & Banning)

Resolution status

New

Rating

★★★★★ (0) ?

Description

Problem: users forget their username

But they should remember their email.

Maybe this feature request is not trivial because password is encrypted with username.

But maybe it could be:

user enters email.

Tiki checks what is the username for that email

login is attempted with the username and password

Ideally, system would accept either email or login in interface (case insensitive)
