Description

The new 3.0 release of categorize.tpl doesn't show all the available categories to a user when a hierarchy of categories is used if the user is not in the 'top' category.

There are also problems with the use of categorisation in the Structures admin screen where categorisation of all the wiki pages in the Structure does not show the changes after submitting the request - although the changes are made.

No longer relevant

Solution

Reverting to the 2.4 version of categorize.tpl with an update to reflect the use of the new \$notable variable seems to cure both these problems.

This updated/reverted categorize.tpl is attached
