Description

Admins can easily create file galleries once the feature is enabled. A registered user - even when granted "admin" privileges for file galleries — cannot create a top-level (i.e. just below default "File Galleries" Gallery, which is "0") gallery, without an error. The user can, however, create galleries within any gallery that resides directly under the top-level gallery (or in any nested gallery).

The error message is as follows:

Notice: invalid variable value: \$_GET%22parentId%22 = -1

Maybe some problem with the parentId when it comes to non-admin users?

Solution

Enable the "tiki_p_trust_input" permission for the Registered user. This may cause other security problems, though (?). Once this permission is enabled, the error described above goes away.
