Description

The registration email seems to give boxed char when mail templates are in french.

I had to add utf8_encode()

to LINE 2727 of lib/userslib.php

```
$mail_data = utf8_encode($smarty->fetch("mail/$mailTemplate.tpl"));
```

in order to correct the text display problem.

But when I debug with

```
$mail_data = mb_detect_encoding($smarty->fetch("mail/$mailTemplate.tpl"));
```

It return the tpl as already in UTF-8, but I had to utf-8 it again to correct it, can someone look into this?
