### Description

Some routine to link a tracker to an Image Gallery, making a tracker of every image gallery, adding an item to the tracker for each item in the ig, etc, would seriously enhance the functionality in the image galleries feature. Image Galleries do handle right the image files (tif support would be nice, though). However, it is near to useless to classify the images themselves, the "categories" feature being of very little use, for example, to have a catalogue of paintings with artist's names, titles, dates, etc. Having some linking code written, it would be easy to use the images through the tracker feature, leaving the handling of the image files to the gallery.
