Description
I have set feature_comment_moderation=y, so new comments are invisible until approval, but they are shown as new comments on the since_last_visit_new module. So if user clicks on this link they come to the page where the comment was made (currently only tested with blog comment, but should be the same with other comments), and don't see this new comment.
I've no idea if this also affects coming version 4, only working with v3.2

Solution
This was fixed by r29799 for Tiki 6.
