When using the Versions plugin, Tiki incorrectly merges the first line of each "version" within the Version navigation bar. This causes problems when parsing wiki syntax for items that must begin at the start of the line (such as the numbering # syntax).

Example:

This broken numbered procedures, when Versions plugin is used to differentiate software versions (such as on doc.tw.o or Smarties).

Solution
Tiki should start the data for each version on a new line. A carriage return should be added after the Versions nav bar.

Fixed in Tiki 7. Will be backported to Tiki 6
