Description
Add ip to syslog and/or action log, so that when anons (at least) are allowed to add content and it's spam (robots seem to be able to post with our current antibot captcha), there is way to identify the ip of the spammer.

So far, antibot captcha is added (in trunk, at least) to:

- wiki edit
- wiki page comments
- forum posts
- tracker item comments
- freetags
- calendar items
- newsletter subscription

The action of adding content on those features should be logged in syslog and/or action log and IP recorded.
