### Description

Some users don't want to understand the difference between "Page Name" and Link when creating an internal link.

This attached patch makes the Page Name field automatically fill in whenever the Link field is changed. The patch was made against tw 4.1.

I think it should be up for debate if both these fields are necessary. Many users of the WYSIWYG feature may be new to the concept of creating links. Less is simpler, and I vote for removing one of these fields.

P.S. Sorry about spamming the mailinglist with this request. Next time I will only submit patch here.
