Description

I tried to import a MediaWiki XML file and got the following error mesage:

Loading and validating the XML file

Fatal error: Class 'DOMDocument' not found in
/wiki/tikiwiki-4.1/lib/importer/tikiimporter_wiki_mediawiki.php on line 69

I am not a PHP programmer but this looks like not all the modules are linked together.

Any help would be appreciated.

Thanks

John

Solution

Check for the presence of the class DOMDocument and if the class is not present produce a user friendly message explaining that the user need to enable PHP DOM folling his distribution specific instructions for this.

Hi John, thanks for your feedback. Which PHP version are you using? DOMDocument as far as I know is builtin in the PHP core, but I don't know since which version.

If you enable the dom module the importer should work. This link might help you <http://php.net/dom>

I will try to add to the code a more friendly message explaining the problem in a few days.

Rodrigo.

I ran phpinfo. We have PHP Version 5.2.9. We are running Fedora 10.

I made sure that php-xml was installed (it needed an upgrade).

The following command:

```
yum install php-dom
```

produces the same output as

```
yum install php-xml
```

i.e.

Package php-xml-5.2.9-2.fc10.x86_64 already installed and latest version

Php info says the following:

libXML support active

libXML Version 2.7.3
libXML streams enabled

I looked at <http://php.net/dom> and didn't see anything that was helpful like "install ..."

Is there a configuration flag that has to be set?

Thanks for your help.

Cheers
John

Rodrigo thanks for your help. I updated PHP by
yum install php-xml.

The instructions on this site were very helpful:

<http://serverfault.com/questions/66189/how-to-enable-dom-without-recompiling-php>

Cheers
John

Hi John, I have added the issue with php-xml to the list of known issues of the importer. In a new version we can add a more user friendly message when the class is not present. Thanks for your help. Please let me know about your experience with the importer. Cheers, Rodrigo.
